MODELING WATER FLOW AND CONTAMINANT TRANSPORT IN SOILS AND GROUNDWATER USING THE HYDRUS COMPUTER SOFTWARE PACKAGES

The short course is organized by the Albert Katz International School of Desert Studies at the Sede Boqer Campus of the Ben-Gurion University in Israel. July 12 - 14, 2009.

INSTRUCTORS:

Dr. Jirka Simunek
Department of Environmental Sciences
University of California Riverside
Riverside, CA, USA

Dr. Naftali Lazarovitch
French Associates Institute for Agriculture and Biotechnology of Drylands,
The Ben-Gurion University of the Negev
Sede Boqer Campus, Israel

Dr. Jirka Šimůnek is a Professor of Hydrology with the Department of Environmental Sciences of the University of California. He received an M.S. in Civil Engineering from the Czech Technical University, Prague, Czech Republic, and a Ph.D. in Water Management from the Czech Academy of Sciences, Prague. His expertise is in numerical modeling of subsurface water flow and solute transport processes, equilibrium and nonequilibrium chemical transport, multicomponent major ion chemistry, field-scale spatial variability, and inverse procedures for estimating the hydraulic properties of unsaturated porous media. He has authored and coauthored over 160 peer-reviewed publications and over 20 book chapters. His numeric models are used by virtually all scientists, students, and practitioners modeling water flow, chemical movement, and heat transport through variably saturated soils. Dr. Simunek is a recipient of the Soil Science Society of America’s Don and Betty Kirkham Soil Physics Award and a past chair of the Soil Physics (S1) of SSSA. He is an associate editor of Water Resources Research, Vadose Zone Hydrology, and Journal of Hydrological Sciences.

OVERVIEW

Soil and groundwater pollution is an ever-increasing, worldwide problem. Tens of billions of dollars are spent each year in the United States and elsewhere to remediate groundwater pollution, and to limit or prevent future contamination of the subsurface. Most subsurface pollution problems stem from activities involving the unsaturated (vadose) zone between the soil surface and the groundwater table. The unsaturated zone hence provides the best opportunities to limit or prevent groundwater pollution. Once contaminants enter groundwater, pollution is essentially irreversible, or can be remediated only with extreme costs. Numerical modeling is becoming an increasingly important tool for analyzing complex problems involving water flow and contaminant transport in the unsaturated zone. This course is designed to familiarize participants with the principles and mathematical analysis of variably-saturated flow and transport.
processes, and the application of state-of-the-art numerical codes to site-specific subsurface flow and transport problems.

**COURSE DESCRIPTION**
The course begins with a detailed conceptual and mathematical description of water flow and solute transport processes in the vadose zone, followed by a brief overview of the use of finite element techniques for solving the governing flow and transport equations. Special attention is given to the highly nonlinear nature of the governing flow equation. Alternative methods for describing and modeling the hydraulic functions of unsaturated porous media are also described. "Hands-on" computer sessions will provide participants an opportunity to become familiar with the Windows-based HYDRUS-1D and HYDRUS (2D/3D) software packages. Emphasis will be on the preparation of input data for a variety of applications, including flow and transport in a vadose zone, variably saturated flow through a dam, flow and transport to a tile drain, and two-dimensional leachate migration from a landfill through the unsaturated zone into groundwater. Calibration will be discussed and demonstrated by means of both one-dimensional inverse problem.

**COURSE SOFTWARE**
The course introduces a new generation of Windows-based numerical models for simulating water, heat and/or contaminant transport in variably-saturated porous media. These include the HYDRUS-1D and HYDRUS (2D/3D) codes for one- and two dimensional simulations, respectively, and the Rosetta code for estimating the soil hydraulic properties (and their uncertainty) from soil texture and related data. HYDRUS-1D and HYDRUS (2D/3D) are supported by interactive graphics-based interfaces for data-preprocessing, generation of unstructured as well as structured finite element grid systems, and graphic presentation of the simulation results. Except for HYDRUS (2D/3D), all software packages are in the public domain.

**COURSE HANDOUTS**
Course handouts include lecture notes prepared by the instructor. Documentation of the RETC, STANMOD, HYDRUS-1D and HYDRUS-2D models is on a CD that will be given to each course participant.

**REGISTRATION AND ACCOMMODATION**
Registration:
1200 NIS for students.
3000 NIS for personnel from private companies, research institutes or other universities.

Accommodation (5 min walking):
300 NIS for a single room in the local guest house

Lunch Suggestion:
40 NIS in the local restaurant
The local mini-market is open from 8:00-19:00
GENERAL

Basic knowledge of the theory of water movement, solute transport and heat transport is recommended. The participant will bring his/her **personal** laptop computer (Minimum system requirements: operating system Windows 2000 / XP / Vista, X86 CPU with 1 GHz, 512 MB RAM, 10 GB total hard disk capacity with about 500 MB reserved for installation, graphic card with a resolution of 1024 x 768 pixels).

MODELING WATER FLOW AND CONTAMINANT TRANSPORT IN SOILS AND GROUNDWATER USING THE HYDRUS COMPUTER SOFTWARE PACKAGES

COURSE OUTLINE

Sunday (12.7.09)

8:00-9:00 Setup

9:00-10:30 Session 1
Conceptual and mathematical description of variably-saturated water flow and solute transport processes, root-water uptake, nonequilibrium transport, decay chains, initial conditions, boundary conditions.

11:00-12:30 Session 2
The HYDRUS-1D software for simulating one-dimensional variably-saturated water flow and solute transport.

Computer session: HYDRUS-1D: Infiltration of water into a one-dimensional soil profile.

Lunch

14:00 -15:00 Session 3
Review of the hydraulic properties of unsaturated porous media; measurement, description, parameter estimation.

16:30 – 16:30 Session 4
Review of numerical methods for solving the variably-saturated water flow and solute transport equations; Application of finite element method to 1D flow and transport.

17:00 – 18:30 Session 5
Computer session: Application of HYDRUS-1D to a transient water flow and solute transport in a layered soil profile.

Monday (13.7.09)

8:30-10:00 Session 6
Inverse modeling; application of HYDRUS to laboratory and field experiments.

Computer session: Advanced one-dimensional forward and inverse problems with HYDRUS-1D.

10:30-12:00 Session 7
Application of finite element method to 2D variably-saturated water flow and solute transport.
transport; The HYDRUS (2D/3D) software package – model structure, examples; Pre- and post-processing with HYDRUS (2D/3D) using the finite element mesh generator.

**Lunch**

14:00 -15:30 Session 8
Computer session: Application of HYDRUS (2D/3D) to a simple two-dimensional problem (infiltration from a subsurface source).

16:00 - 17:30 Session 9
Computer session: Application of HYDRUS (2D/3D) to a complex two-dimensional problem (water flow and solute migrating to a stream).

18:00 - 19:00 Session 10
Computer session: Application of HYDRUS (2D/3D) to a simple three-dimensional problem.

**Tuesday (14.7.09)**

8:30-10:00 Session 11
Preferential and Nonequilibrium Flow and Transport.

Computer session: Application of HYDRUS-1D to simulate nonequilibrium flow and transport.

10:30-12:00 Session 12
Multicomponent biogeochemical transport modeling using the HYDRUS computer software packages; Introduction to the HP1 code, which was obtained by coupling HYDRUS-1D with the PHREEQC biogeochemical code.

**Lunch**

14:00 -15:30 Session 13
Computer session: Application of HP1 to a simple solute transport problem involving cation exchange.

16:00 - 17:30 Session 14
General session: Open session, other applications; discussion.
